

Dr. Bernd Benninghoff has been involved in the medical, pharmaceutical, biology, immunology, chemistry and oncology fields for more than 30 years. He has worked in various positions in leading pharmaceutical companies. He became involved in GSK's Global Medical Affairs because he had always wanted to explore the benefits and education of people on the value and importance of preventive medicine. As a co-founder and past-CEO of BioMed-Klinik, he expressed his aspiration to work in research. He initiated more than 100 clinical trials in different therapeutic areas, such as respiratory, central nervous system, cardiology, dermatology, oncology and infectious disease, where he made inventions, filed patent letters and issued various publications. With GSK, Bernd is responsible for the evidence generation and strategic positioning of the Human Rotavirus Vaccine, which is launched in more than 130 countries with more than 300 Million infants being vaccinated. You may want to ask Bernd about vaccination and how vaccines benefit and add value for people.
