

Dr. Jacqueline Tate is the Lead of the Viral Gastroenteritis Epidemiology Team in the Division of Viral Diseases at the US Centers for Disease Control and Prevention (CDC). Her work focuses on accelerating the uptake and use of rotavirus vaccines by designing and conducting studies to determine vaccine effectiveness in a variety of real-world settings, to identify reasons for diminished effectiveness in certain settings and examine strategies to overcome them, and to monitor the safety of these vaccines. She has collaborated with Ministries of Health and academic institutions all over the world to provide subject matter expertise and technical assistance on studies examining rotavirus disease burden, cost-effectiveness of rotavirus vaccines, and the effectiveness, impact, and safety of rotavirus vaccines in routine use. She also monitors the impact of the rotavirus vaccine program in the United States. She received her MSPH in epidemiology from the Rollins School of Public Health at Emory University, her PhD in epidemiology from the University of North Carolina at Chapel Hill, and trained with the Epidemic Intelligence Service at CDC.
